

A Collaboration Designed to Help Enhance Outcomes

PREPARING FOR A VALUE-BASED FUTURE

The market is accelerating from volume- to value-based care, where economic incentives for payers and providers are aligned to help improve health status and outcomes for patients.

The COVID-19 pandemic has put a spotlight on health care's vulnerabilities to fee-for-service and volume-based reimbursement. COVID-19 impacts have accelerated a growing interest in value-based initiatives, with nearly half of surveyed health care executives indicating increased interest in alternative payment models.¹

THE SUPPORT YOU NEED

To help health systems capitalize on these market trends, Cerner and Lumeris are collaborating through *Maestro*TM. *Maestro* offers an end-to-end value-based care solution combining an EHR-agnostic technology, data and insights platform with an operational model based on ten years of experience, to assist you in building your own population health services organization (PHSO).

AN END-TO-END SOLUTION FOR YOUR VALUE-BASED CARE JOURNEY

Whether you are considering entering a value-based contract or launching and operating your own health plan, *Maestro* can help you from strategy design to execution. We meet you where you are on your journey — we help you develop a straight-forward strategy for where your health system is today and for what you need tomorrow.

Population Health Services Organization

We strive to drive improved performance across value-based populations, like Medicare Advantage, commercial and Medicaid. You do not need to take a piecemeal approach — *Maestro* offers technology and services built into our PHSO that are designed to help optimize your provider network, transform care delivery, align organizational governance, improve patient outcomes and experience, and provide additional operational support (figure below).

OUR APPROACH

We align our collaboration around your success to support clinical and financial outcomes across the populations you serve. We offer an aligned engagement model aimed to help amplify consumer and provider satisfaction — joining together the combined expertise, best practices and insights from both organizations to support health systems on their journey to value.

Maestro is designed to help you:

- Develop a long-term, strategic plan specific to your value-based journey across all populations
- Implement an operational plan to accelerate your organization's migration to value-based models
- Engage providers using proven programs and methodologies to transform care delivery
- Onboard clinical data from disparate EHRs and financial and administrative data, providing a more holistic view of your populations
- Gain efficiencies in critical operating processes, like value-based contract modeling, clinical programs, risk adjustment and related areas that impact outcomes
- Bring transparency to provider network performance and improvement opportunities

DESIGNED TO ACCELERATE SUCCESS IN VALUE-BASED CARE

- o Lumeris brings 10+ years of collaborative provider/payer experience with validated results on cost and quality improvements
- o Cerner brings EHR-agnostic technologies designed to scale and leverage health systems' existing EHR infrastructures
- o Lumeris brings a model aimed to mitigate operational risk and accelerate the transition to value-based care
- o Cerner brings both integration know-how and a data and insights platform designed to help alleviate challenges associated with integrating disparate systems and data, offering actionable data at the point of care
- o Together, *Maestro* brings an end-to-end population health solution designed to help you on your journey to a value-based world

PREPARE FOR THE FUTURE WITH MAESTRO

The growing demand for high-quality, cost-effective care — that improves outcomes — will help drive health systems preparing for a sustainable future. Position your organization for success with *Maestro*.
